

STANDARD WELDING AND PLASMA CUTTING EQUIPMENT

8TH EDITION

WELDING AND CUTTING TECHNOLOGY

For over 100 years now ESAB has been one of the leading and most innovative companies in welding and cutting technology. We are continuously working on the optimization and development of welding and cutting processes so that customers and partners can profit from technical progress.

We do of course pay great attention to the quality of our products, which are manufactured and sold worldwide. The experience of our staff, our service and our technical support are available to our partners. A wide network of branches, area representatives and trading partners allow use to be close to our customers - worldwide.

Ever since the foundation of the company back in 1904, satisfying the needs and demands of our customers has always been our main focus. The company was founded by Oscar Kjellberg, a Swedish engineer and the inventor of the coated welding electrode. His invention, which revolutionised the manufacture of boilers and ships, is still a core product in the ESAB range.

Today, in parallel with the development of modern filler metals ESAB has developed welding units that are perfectly matched for just about any process.

READY TO USE (RTU) PACKAGES

Within Europe ESAB can also offer RTU packages. RTU is a complete equipment package consisting of standard components built to order or stocked in ESAB's factory. All parts will be pre-fitted, packed and delivered together. Saving time for the customer. For details on how to order RTUs please contact your local ESAB representative.

MANUAL METAL ARC WELDING

Manual metal arc welding is often called manual electric welding, stick, GMAW or MMA welding. It is the oldest and most versatile form of arc welding. The electric arc is set up between a coated welding electrode and the work piece. The metallic core of the coated welding electrode melts in the arc and becomes the molten weld pool drop by drop.

A portion of the coating stabilizes the arc and provides the required gas protection. The rest of the coating forms a slag that protects the weld pool and the cooling seam from the atmosphere. This slag must be removed after each welding pass.

There are hundreds of different types of electrodes. The strength and toughness of the weld seam can be determined very precisely by their alloying elements.

MMA welding is mostly used on steel based materials. Despite its comparatively low deposition rates the process has unbeatable advantages when welding outdoors and in hard to reach places

ArcPlus™ II

NO MORE SPATTER WITH ARCPLUS™

ArcPlus™ allows welding without spatter even with difficult electrodes. The restriking of the arc has been greatly improved, especially with basic electrodes.

Through ArcPlus™ II the welding current that is required for a stable process is also less than that required by conventional units.

LiveTig™

TIG welding with manual metal arc or MAG units often fails due to the arc striking method.

LiveTig™ provides a reliable striking procedure for the TIG welding process, which is gentle on the electrodes.

RENEGADE ES 300i

POWERFUL AND PORTABLE

Renegade ES 300i is an inverter based MMA/Stick and LiveTIG machine with extreme power to weight ratio. The compact format makes it easy to carry and bring to any jobsite. Combined with high duty cycle and the ability to run the machine on long mains and welding cable makes this a superior welding machine for both on-and off site applications.

The machine has an automatic input voltage sensor and can operate with any input voltage between 230V and 480V 3-phase.

For professional MMA welding with electrodes up to 6 mm with a high duty cycle of 300 A at 40%. Ideal for operation in high ambient temperatures.

- Extreme power to weight ratio
- Automatically adjusts to optimal start and stop
- Designed for extreme conditions including up to +55°C ambient temperature
- Voltage booster provide additional arc voltage for superior cellulosic weld performance
- Professional welding applications
- 3 memory settings
- Rugged composite casing for durability
- IP 23 designed casework suitable for outdoor site work
- For installation and production
- For repair and maintenance

CADDY® ARC 151i AND 201i

DEVELOPED FOR DURABILITY

The Caddy's are equipped with large OKC 50 welding current connections to withstand heavy loads. Due to the compact design and a polymer casing that is impervious to impacts, these devices are light and easy to transport. The large cooling unit and the carefully thought out design ensure a long working life and allow use even under rough working conditions.

The new inbuilt ArcPlus™ II function further improves the welding arc and ensures that there is less spatter and better restriking of the arc.

The Caddy® has been designed in such a way that all the main components in the machine are kept clean and free of dust. Caddy® complies with the requirements of insulation type IP 23 and is thus suitable for use outdoors. The long-lived construction and the excellent welding properties of the machines ensure reliable use on a day to day basis.

Power Factor Correction - PFC. Caddy® Arc is equipped with automated power factor correction (PFC), which minimizes disturbing feedback effects in the mains supply network. Furthermore, the devices are less sensitive to fluctuations in the mains power supply and thus allow operation from generators.

Caddy Arc has a large action radius through the ability to use mains intermediate cables of Ø 2.5 mm² and up to 100 m in lengths without power losses, also improved compatibility with generators through PFC - Power Factor Correction.

- Four different control panels to choose from
- IP 23 designed casework suitable for outdoor site work
- Robust housing that is impervious to impacts
- Thermal overload protection
- For installation and production
- For repair and maintenance

CONTROL PANEL A31

- For Caddy® Arc 151i
- Single button operation
- TIG (scratch start)
- Hot Start (preset)
- Arc Force (preset)

BUDDY™ ARC 145 AND 180

PORTABLE SOLUTIONS FOR PROFESSIONAL WELDING

The Buddy™ family is a series of robust and durable power source for the professional welders. The machines provides state-of-the-art welding performance and reliability through use of the latest high grade IGBT technology.

Designed for durability

The internal electronics are cooled by a highly efficient fan for added reliability and monitored by a thermal protection system. The machine has been equipped with three heat sinks which further extending the life time of the product. The casing has been designed to withstand harsh environments and is rated to IP 23S standard. The machine incorporates both a shoulder strap and a robust carry handle.

Buddy™ Arc provides a smooth DC (Direct Current) welding power which allows you to weld most metals such as alloyed and non alloyed steel, stainless steel and cast iron. Buddy™ Arc can weld most electrodes from Ø1.6 -3.2 mm.

TIG welding with Buddy™ Arc 180

The Buddy™ Arc 180 can easily perform TIG-welding using a “Live Tig” start. Equip the power source with the optional Tig-Torch which has an in-built gas valve, a gas regulator and a bottle of gas and you are ready to weld mild steel or stainless steel with or without filler material.

Ideal applications

- Plant Fabrication & Maintenance
- Site Maintenance/Repair
- Civil Construction
- General Fabrication
- Agriculture

Buddy™ Arc 145 is very easy to use and features only one knob for the setting of the weld current.

Buddy™ Arc 180 features one knob for the setting of the weld current. A switch on the front panel provides easy selection of the MMA or TIG process. The arc force and hot start settings are adjusted automatically according to the set welding current giving excellent arc starts and welding performance across the amperage range of the machine.

Buddy™ Arc 145

- Superior arc characteristics
- Generator compliant
- Easy to use
- Practical & robust design
- Can be used with extended mains cable

ORIGO™ ARC 410c, 650c AND 810c

HIGH-POWER DC RECTIFIERS

In the Origo™ Arc C range the most modern power control technology and robust basic technology has found a perfect match. Stability and durability characterize these construction site welding power sources.

The welder benefits from Hot Start for optimal striking of the electrode or from Arc Force for perfect regulation of the process in all situations. Anti Stick prevents the electrodes from sticking to the workpiece at the start of the weld.

On large construction sites, in shipyards or when laying pipelines, many already put their trust in the legendary reliability of the Origo™ Arc welding units.

- Extremely well suited for difficult to run cellulosic
- Superlative welding characteristics - optimal quality
- Large setting range - versatile in use
- Mains voltage compensation - constant welding parameters and stable control
- Stepless current setting - can be controlled remotely and exact setting options
- HotStart, ArcForce and Anti Stick
- Optimally suited for gouging
- Suitable for special mains voltages
- Offshore versions with added protection for the toughest applications outdoors
- Available in stationary or mobile wheeled variants
- MIG/MAG welding with MobileFeed 301 AVS

ORIGO™ MIG 4004i A44

HIGH-PERFORMANCE INVERTERS

The Origo™ Mig 4004i A44 is the ideal partner for manual metal arc welding in your operation or on the construction site.

A powerful device for production welding, repair and maintenance or on site installation.

This 3rd generation inverter offers considerable improved efficiency and power factor is approximately 1.

The ESAB Arc Plus™ II controller ensures superlative welding properties and perfect restriking when using basic MMA electrodes.

With the Origo™ Mig 4004i A44 you can work with electrodes of up to 6 mm in diameter without any problems, for gouging you can use carbon electrodes up to a diameter of 8 mm.

Optionally, MIG/MAG welding in conjunction with the MobileFeed 301 AVS wire feed device is possible.

OPTIMUM WELDING WITH MMA ELECTRODES

- Superlative welding properties - High deposition and high quality
- Standby function – energy saving system.
- Internal dust filter - reduces possible failures due to dust particle ingress
- TIG welding with ESAB LiveTig™ striking
- IP 23 protection - for work outdoors
- Can be controlled remotely, digital display
- Integrated handles

CONTROL PANEL A44

- Selection of electrode type, basic - rutile - cellulose
- MMA welding and TIG with LiveTig™ striking
- Hot Start and Arc Force can be set
- Stepless inductance
- Voltage Reduction Device
- Carbon arc gouging
- Two memories
- Digital display
- Drop welding and setting of TIG minimum current through a background menu
- Optional MIG/MAG welding with MobileFeed 300 AVS

MobileFeed 301 AVS

Ordering information

Origo™ Mig 4004, A44	0465 152 880
Welding cable, complete, 5m	0700 006 893
MobileFeed 301 AVS	0558 102 207

Delivery includes:

5 m mains cable and CEE plug. Return cable, complete, 5m.

TIG torches at page 102

Remote controller, page 68

Gouging torch: see ESAB accessories catalogue

MIG/MAG WELDING

MIG/MAG welding is one of the gas-shielded metal arc welding processes. The arc burns between a continuously fed and consumable wire electrode and the work piece. The arc and the weld pool are protected by an active or inert gas. The process can be used with most materials and there is a wide range of filler metals.

Compared to manual metal arc welding, MIG/MAG welding is far more productive. There is no need to change electrodes frequently and the net productivity is significantly greater. For every kilogram of rod electrodes

used, only around 65% actually goes into the welded material. With wire electrodes this value is already around 85 - 90%.

MIG/MAG welding is a very versatile process that allows high deposition rates to be attained in all positions. It is employed in almost all areas involving the welding of unalloyed and low-alloy steels, high-alloy steels, nickel-based materials and aluminium. MIG/MAG pulse welding is frequently used on high-alloy steels and aluminium. Filler wires are increasingly used, which have a whole series of advantages in addition to increased productivity.

QSet™

The arc has been reinvented! This unique, intelligent system is so flexible: whether it involves construction steel under CO₂, under a mixed gas, with stainless steel or aluminium, whether you weld with self-protecting cored wire without protective gas or cored wire with protective gas or carry out GMA brazing. QSet™ automatically adjust the arc to suit the combination of wire/gas being used and sets the perfect parameters for a stable short arc. Lightning-fast regulation ensures that the welding can be undertaken with the minimum of spatter.

TrueArcVoltage™

Exact repeatability of welding parameters is particularly important for reproducing quality welds. ESAB units with True Arc Voltage™ measure the values directly at the Arc and not, as is usual, in the machine. You have the process firmly under control even when using extended cable lengths or torches.

SuperPulse™

With SuperPulse™ various types of arc can be superimposed in a process: the advantages of pulse-welding combined with those of the short arc, the spray arc or of a pulse with another frequency. In this way the welding speed, application of heat, weld penetration behaviour and deposition rate are perfectly balanced. Cold arc, deep weld penetration, perfect fusion - everything under control.

Swift Arc Transfer™

SAT™ is a high productivity MIG process using AristoRod™ non-copper coated wires with advanced surface characteristics at travel speeds well beyond the limits of normal spray arc welding. The advantage with AristoRod™ non-copper-coated wire over copper-coated wires is that it does not quickly contaminate the feed system with copper particles. SAT™ is developed for robotic, automated and mechanized welding.

REBEL™ SERIES

DUAL INPUT VOLTAGE MACHINES FOR MIG/MMA/LIFT TIG

The Rebel™ Series Welding Machines offer 120/230V flexibility and some of the most innovative welding technology available. A breakthrough design inspired by professional welders, the Rebel is a complete package to weld anything –mild steel, aluminium, stainless steel –and go anywhere.

True multi-process performance for best-in-class MIG, Flux-cored, MMA, including challenging electrodes, and Lift TIG welding with Rebel EMP 215ic.

Exclusive sMIG (“smart MIG“) feature continuously learns and adapts to the operator’s welding technique to provide a stable arc and superior, repeatable welds; increases productivity for the experienced welder, and reduces training time for novice welders.

Innovative user interface with a large TFT display to provide a clear view of the weld parameters and settings, also from a distance. The display is loaded with exclusive features: on-demand availability of the user’s manual, listing of spare parts –all in multiple languages.

Choose from 3 models:

- Rebel EMP 215ic for MIG/MMA/Lift TIG
- Rebel EM 215ic for MIG
- Rebel EMP 235ic for MIG/MMA/Lift TIG

CADDY® MIG C160i AND C200i

EXPERIENCE A NEW LEVEL OF MOBILITY

Compact, light and powerful. Caddy® Mig C160i/ C200i welding inverter is a perfect companion for your travels. Sling the carrying strap over your shoulder and go on to the next job. This go-anywhere welding unit offers industrial welding capacity even in the most remote of locations. Whether you choose the Caddy® Mig C160i or the intelligent C200i, your new partner will exceed your expectations. From light metal structures, Auto-body repair, workshop or site maintenance and installation. To tough demanding agricultural and industrial applications, the Caddy MIG is robust, efficient, reliable and user-friendly.

Caddy MIG is powered by single -phase 230V and can be connected to either mains electrical power or power provided by a generator without any issue.

The simplest way to obtain excellent high grade welds: Just select the material thickness and start welding. Or even easier still, Caddy MIG 200 with QSet™.

MORE POWER THAN EVER BEFORE

The energy-efficient PFC module (Power Factor Correction) smoothes out the current for effective operation. The result is up to 30% increase in welding power for the same fuse rating.

CADDY® MIG

- Easy to use; Uses material thickness to preselect welding parameters
- Fine adjustment of heat input
- Weight under 12 kg (incl. torch, work piece cable and main cable)
- Single phase 230 Volt 50/60 Hz
- Generator-compatible
- Suitable for 100-200 mm spools
- High quality welding torch MXL™ 180
- Tool holder
- Roller holder for torch and cable
- Easy polarity change over when using self-shielding cored wire.

CADDY® MIG C160i

- Optimized for construction steel, metal sheet thicknesses from 0.5 - 4.0 mm.
- Solid and cored wire, wire diameter 0.8 mm

CADDY® MIG C200i

- Sheet metal thicknesses 0.5 - 6.0 mm
- Wire diameter 0.6 - 1.0 mm
- Construction steel & stainless steel
- Aluminium
- GMA brazing of galvanized metal sheets
- QSet™

Welding wires in 200 mm spools

ORIGO™ MIG/MAG C170, C171, C200 C201, C250 AND C251

COMPACT UNITS FOR LIGHT AND MEDIUM DUTY COMMERCIAL USE

- Power Smoothing Device™ - excellent welding properties for single-phase units
- Simple polarity changing - allows the use of solid wire and Flux-cored wire
- Also suitable for the welding of aluminium and GMAW brazing of galvanized metal sheets
- IP 23 - allows use outdoors
- Simple setting of the welding parameters
- MXL™ torches - proven by professionals to be reliable and durable.

Welding torch	PSF™	PSF™	PSF™
Type/cable length	250 / 3,0 m	250 / 4,5 m	305 / 3,0 m
Connection	Euro	Euro	Euro

Mains cable 5m with plug, gas hose 1,5m with clamps and quick connector, earth cable complete, wear parts for 0,8-1,0mm wire (C280), 1,0-1,2mm (C340-420), safety chain for gas bottle and wheels.

- Very good welding properties - stable arc and very finely matched voltage steps
- Also suitable for the welding of aluminium and GMA brazing of galvanized metal sheets
- Galvanized metal housing with optional air filter designed for use under rough conditions
- Two or three inductance connections - optimal arc dynamics
- 4-roll wire feed available - perfect wire conveying
- Professional ESAB PSF™ torches included
- Origo™ Mig C340 PRO and C420w PRO optionally with electric Push-Pull welding torch in 6 or 10 m length
- Simple polarity change - allows the use of solid wire and cored wire
- Origo™ Mig C420w PRO with ELP, ESAB LogicPump (forced switching over of the water cooling if required)

ORIGO™ / ARISTO® MIG C3000i

INVERTERS FOR FABRICATION AND INDUSTRY

- Inverters with first-class welding properties
- MMA welding with electrodes up to 6.0 mm diameter
- TrueArcVoltage™ guarantees the exact welding voltage
- Electronically-regulated motor for constant wire feed
- 4-roll wire feed mechanism
- Excellent GMA brazing of galvanized sheets
- Cooler optional, with ELP, ESAB LogicPump (forced switching over of the water cooling if required)
- Optionally with electric Push-Pull welding torch in 6 or in 10 m length
- Can be controlled remotely, digital display
- IP 23 - allows use outdoors

Technical data	Origo™ Mig C3000i
Mains supply, V / ph	400 / 3

60% duty cycle, A	240
100% duty cycle, A	200

Usable wire diameters	
Mild and stainless steels	0,6 - 1,2
Cored wires	1,0 - 1,2
Aluminium	1,0 - 1,2

Delivery includes

Mains cable 5m with plug, gas hose 2m with clamps and quick connector, earth cable complete, wear parts for 0,8-1,0mm wire.
Origo™ Mig C3000i MA24 is supplied with PSF305 torch - 4,5m.

Remote controller
at page 68

CONTROL PANEL MA24

- Controller in the wire feed device for MIG/MAG and MMA electrode welding
- 35 preprogrammed synergic lines
- QSet™ Parameter automation
- 2 / 4 stroke torch switch actions
- Gas test and tension-free wire feed
- Gas pre- and post-flow can be set
- Creep start and end crater filling
- Continuous choke setting
- 3 memory slots, can be called up from the torch button
- Can be controlled remotely, digital display

CONTROL PANEL U6

- MIG/MAG pulse-type welding
- QSet™ Parameter automation
- Preprogrammed synergic lines
- 2/4 -stroke torch controller
- End of weld crater filling
- Creep start, Hot Start and wire burn-back time that can be set
- Gas pre- and post-flow can be set
- Gas test and tension-free wire feed
- Professional MMA electrode welding
- 10 memory slots
- Multi-lingual menu guidance
- Limit value assignment, password protection

ORIGO™ MIG L305 AND L405

RELIABLE AND SIMPLE TO USE MIG/MAG UNITS

- Low investment costs
- Robust, step-controlled MIG/MAG units
- 10 or 40 voltage steps
- Choice of 2- or 4-rolls wire feed mechanism
- Intermediate cables up to 10 m
- Galvanized sheet steel housing

ORIGO™ FEED L302

- 2-roll feed
- Wire feed speed
- Wire burn-back time
- 2/4 cycle torch controller

ORIGO™ FEED L304

- 4-roll wire feed
- Wire feed speed
- Wire burn-back time
- Spot-welding
- Creep start
- Voltage free inching of the wire
- Gas test
- 2/4 cycle torch controller

Wear and spare parts for
torches at page 60

Wear and spare parts for wire feeders at page 64

ORIGO™ MIG 320, 410 AND 510

VERSATILE, SIMPLE AND POWERFUL

- Robust, step-controlled MIG/MAG units for the upper capacity range
- 40 voltage steps
- Intermediate cables up to 35 metres
- Electronically regulated motors for constant wire feed
- Choice of two 4-roll wire feed devices, up to 2.4 mm wire electrodes
- Cooler with ELP, ESAB LogicPump (forced switching over of the watercooling if required).
- Automatic standby mode to save energy
- Galvanized sheet steel housing
- Wire feed speed can be controlled remotely
- Comprehensive accessories
- IP 23 - allows use outdoors

CONTROL PANEL M12

- Wire feed speed
- Creep start
- 2 / 4 stroke torch switchactions
- Wire burn-back time
- Wire feed speed can be controlled remotely
- Prepared for electric Push-Pull welding torches in 6 or 10 m
- Prepared for mechanisation, ESAB Miggytrac and Railtrac

Aluminium	1,0 - 1,6	1,0 - 2,4

CONTROL PANEL A13

- Controller in the current source for MMA electrode welding and gouging, regardless of the wire feed unit
- Can be controlled remotely from the current source
- Provided as standard with Origo™ Mig 502c/502cw/652c/652cw
- Optional with the Origo™ Mig 402c/402cw
- TIG welding with contact striking optional
- Hot Start and Arc Force

CONTROL PANEL M13

- Controller in the wire feed device for MIG/MAG welding
- TrueArcVoltage™ guarantees an exact welding voltage
- 2 / 4 -stroke torch controller
- End crater filling, wire burn-back time
- Creep start
- Gas test and voltage free wire inch optional
- Cooler with ELP, ESAB LogicPump (forced switching over of the water cooling if required)

Delivery includes:

Trolley with gas bottle shelf and safety chain, wire feeder pivot, 5m mains cable and 5m earth cable

Origo™ Feed 304: Consumables for 1.0 - 1.2 mm steel wire

Origo™ Feed 484: Consumables for 0.9 - 1.6 mm steel wire

Complete Package

● Origo™ Mig 402cw + Origo™ Feed 304w M13 V/A
+ PSF™ 410w – 4,5 mt. + earth cable 5 mt.
+ connection cable 10 m

0479 100 220

● Origo™ Mig 502cw + Origo™ Feed 304w M13 V/A
+ PSF™ 510w – 4,5 mt. + earth cable 5 mt.
+ connection cable 10 m

WARRIOR™ 400i AND 500i CC/CV

THE RELIABLE MULTI-PROCESS WELDING EQUIPMENT DESIGNED FOR HEAVY DUTY PRODUCTIVITY

- Multi-Process: including MIG, Flux-Cored, Stick, Live TIG and Arc Gouging
- High Duty cycle for long runs and various applications giving high productivity
- IP23 rating for outdoor and indoor use in rough environment
- Simple and clear user interface
- Robust and ergonomic handles also for mechanical lifting
- Easy to read sun friendly display
- Inverter technology - Smaller, lighter and less energy cost
- Generator compatible for flexible use in different job sites
- Automatic Hot Start/Variable Arc Control
- Wide input voltage range to support regional requirements

ORIGO™ MIG 4004i AND 5004i

VERSATILE WELDING INVERTERS FOR COMMERCE AND INDUSTRY

Origo™ Mig 4004i and 5004i provide high duty cycles for those maximum performance heavy duty applications. These third generation inverters offer considerable improved power efficiency and a close to unity Power Factor. This minimizes your energy consumption and will offer significant reductions in your energy costs with the same welding conditions.

Origo™ Mig 4004i & 5004i offer you undreamt of versatility with their wide range of control panels.

For your MIG/MAG and MMA applications select from the MA23 or MA24 control panels. The MA23 control panel includes all basic functions required for high productivity welding as well as parameter memory functions. The MA24 control panel has the added functionality of 35 pre-programmed synergic lines and is equipped with ESAB's patented QSet™ intelligent technology for improved productivity and quality.

By selecting Origo™ Mig 4004i A44, you can use it without a wire feed unit for high quality professional MMA welding and for TIG welding with the new LiveTig™ ignition.

Origo™ Mig 4004i A44
Origo™ Feed 3004 MA24

Origo™ Mig 5004i
Origo™ Feed 3004w MA24

- Superlative welding properties - High utility and high quality through rueArcVoltage™
- Professional MMA electrode welding with ArcPlus™ II controller
- Automatic standby mode to save energy
- ELP - ESAB LogicPump, starts the water pump automatically
- Type of insulation IP 23 - for work outdoors
- Can be controlled remotely, digital display
- Optionally with electric Push-Pull welding torch in 6 and 10 m
- Can be used with mechanisation, ESAB Miggytrac and Railtrac
- These 3rd generation inverters offer considerable improved efficiency and power factor is approximately 1.

Note: 4004i with A44 panel = 400A @ 60% and 300A @ 100%

CONTROL PANEL MA23

- Controller in the wire feed device for MIG/MAG and MMA welding
- 2 / 4 stroke torch switch actions
- Gas test and tension-free wire feed
- Gas pre- and post-flow can be set
- Continuous choke setting
- 3 memory slots, called up from the torch button
- Can be controlled remotely, digital display

CONTROL PANEL MA24

- Controller in the wire feed device for MIG/MAG and MMA welding
- 35 preprogrammed synergic lines
- QSet™ Parameter automation
- 2 / 4 stroke torch switch actions
- Gas test and tension-free wire feed
- Gas pre- and post-flow can be set
- Creep start and end crater filling
- Continuous choke setting
- 3 memory slots, can be called up from the torch button
- Can be controlled remotely, digital display

Delivery includes

5m mains cable with CEE plug and 4,5m earth cable.

ORIGO™ / ARISTO® MIG 4002c, 5002c, 6502c

For more information on WeldCloud™ see page 81

MAXIMUM PERFORMANCE FOR HEAVY DUTY APPLICATIONS

Mig 4002c, 5002c and 6502c are workhorses for MIG/MAG and MMA electrode welding. Robust, continuously variable rectifiers with digital control, ESAB TrueArcVoltage™ technology and a fantastic price/performance ratio. Four different operating panels are available for the wire feed unit.

Origo™ MA23 offers you the main functions for MIG/MAG and MMA welding.

Origo™ MA24 offers you 35 preprogrammed synergic lines and the QSet™ function, the self-learning parameter automation system for the perfect short arc.

Aristo® U6: MIG/MAG pulse-welding with preprogrammed synergic lines and the QSet™ function. Menu guidance in English and many other languages.

Aristo® U8₂ and U8₂ Plus:

See page 76 for further details.

POWER SOURCE FEATURES

- High duty cycle. Multi-voltage versions for special mains voltages
- Superlative welding properties - High utility and high quality through TrueArcVoltage™
- Choice of two 4-roll wire feed devices, up to 2.4 mm wire electrodes
- Continuously variable rectifiers
- Crane lifting eyes, frame suitable for lifting with forklifts
- Solid, galvanized sheet steel housing with optional air filter. IP 23 insulation - for work outdoors
- ELP - ESAB LogicPump, starts the water pump automatically
- Automatic standby mode to save energy
- Can be controlled remotely, digital display
- Optionally with electric Push-Pull welding torches in 6 or 10 m
- Can be used with mechanisation, ESAB Miggytrac and Railtrac

CONTROL PANEL MA23

- Controller in the wire feed device for MIG/MAG and MMA welding
- 2 / 4 stroke torch switch actions
- Gas test and tension-free wire feed
- Gas pre- and post-flow can be set
- Continuous choke setting
- 3 memory slots, called up from the torch button
- Can be controlled remotely, digital display

CONTROL PANEL MA24

- Controller in the wire feed device for MIG/MAG and MMA welding
- 35 preprogrammed synergic lines
- QSet™ Parameter automation
- 2 / 4 stroke torch switch actions
- Gas test and tension-free wire feed
- Gas pre- and post-flow can be set
- Creep start and end crater filling
- Continuous choke setting
- 3 memory slots, can be called up from the torch button
- Can be controlled remotely, digital display

ARISTO® MIG 3001i

OPTIMAL WELDING SOLUTIONS

Aristo® Mig is designed for high productivity advanced manual and robotic welding applications. ESAB TrueArcVoltage™ technology, advanced knowledge of hardware and software together with more than 20 years of experience in the construction of digital welding units have been combined to produce the perfect solution. For ESAB innovation also means intuitive operation. Settings menus available in English and in many other languages.

Aristo® U6

MIG/MAG pulse-welding with preprogrammed synergic lines that can be replaced as desired and the unique QSet™ function, the self-learning parameter automation system for the perfect short arc.

Aristo® U8₂

Providing you with the ultimate level of control over the welding process. With ESAB SuperPulse™ and Aristo® Feed 3004 you have the toughest welding tasks well under control. Your welding data settings can be managed optimally and saved on a memory card or stick. Documentation of your welding data? No problem, that too is available as standard.

- Superlative welding properties - High utility and high quality through TrueArcVoltage™
- Inverters based on IGBT technology - High performance and reliability
- Housings made of galvanized steel - Robust and durable
- Professional MMA welding with ArcPlus™
- Automatic standby mode to save energy
- ELP - ESAB LogicPump, starts the water pump automatically
- IP 23 protection - for work outdoors
- Can be controlled remotely, digital display
- Optionally with electric Push-Pull welding torch in 6 and 10 m
- Can be used with mechanisation, ESAB Miggytrac and Railtrac

Technical data	Aristo® Mig 3001i

Gouging torches, see ESAB Accessories catalogue

Aristo Mig 3001iw/Feed 3004w U6

Delivery includes

5m mains cable with CEE plug and 4,5m earth cable.

Suggested configurations

Aristo® Mig 3001i with Aristo® Feed 3004 U6

Mig 3001i	0459 740 882
Aristo® Feed 3004, U6	0460 526 886
Connection cable - m. 1,7	0459 528 780
PSF™ 305, L=3,0m, self-cooled	0458 401 880
4 wheels trolley	0460 565 880

Aristo® Mig 3001iw with Aristo Feed 3004w U6, water cooling

Mig 3001iw	0459 740 883
Aristo® Feed 3004iw, U6	0460 526 896
Connection cable - m. 1,7	0459 528 790
PSF™ 410w, L=3,0m, water cooled	0458 400 883
4 wheels trolley	0460 565 880

For other configurations, see page 54

ARISTO® MIG 4004i PULSE

LOW WEIGHT MULTI-PROCESS INVERTER EQUIPMENT

- High Duty Cycle – suitable for long runs
- Wide mains input tolerance: 380 - 440 V +/- 10%
- Generator compatible – for on site use
- Pre-programmed synergic lines to ensure optimum settings with a wide choice of materials, wire dimensions and gas combinations.
- Memory for 10 (U6) or 255 (U8₂) welding schedules
- Customized synergic lines (U8₂)
- Creep start, gas pre-flow and hot start provide a soft and more direct start with less spatter
- Crater filling adjustable burn-back time and post gas
- Standby Function – energy saving system

For more information on
WeldCloud™ see page 81

CONTROL PANEL MA25 PULSE

- Advanced Pulsed welding
- Steel and Aluminium panel options
- Synergic lines (Steel 54, Aluminium 30)
- QSet™
- Hot Start & adjustable burn-back time
- 3 memory slots
- Continuous choke setting
- Current slope up / slope down
- Gas pre-flow / post-flow
- 2/4 stroke
- Digital V/A-meter
- Optional digital remote control
- MMA functions ArcPlus™ II, Hot Start and Arc Force

CONTROL PANEL U6

- MIG/MAG pulse-type welding or professional MMA welding
- QSet™ Parameter automation
- Preprogrammed synergic lines
- 2 / 4 stroke torch switch actions
- End crater filling
- Creep start, Hot Start and wire burn-back time that can be set
- Gas pre- and post-flow can be set
- Gas test and tension-free wire feed
- 10 memory slots
- Limit value assignment, password protection

Complete Package

- Aristo® Mig 4004i Pulse + Aristo® Feed 3004w U6 + 4 wheels trolley + COOL 1 + PSF™ 410w - 4.5mt + connection cable 1.7mt **0479 000 002**

ARISTO® MIG U4000iw, 5000iw AND U5000iw

OPTIMAL WELDING SOLUTIONS

- Superlative welding properties - High benefits from TrueArcVoltage™
- Inverter based on IGBT technology - High performance and reliability
- Housing with frame made of aluminium extruded profile, can be lifted by crane
- Dust filter included - reduces possible failures due to deposits of grinding dust, for example
- Energy-saving mode after 6.5 minutes if welding is interrupted
- ELP, ESAB LogicPump, starts the water pump automatically
- Optionally with electric Push-Pull welding torches in 6 or 10 m length
- Can be used with mechanisation, ESAB Miggytrac and Railtrac
- Can be controlled remotely, digital display
- IP 23 - allows use outdoors

PROFESSIONAL TIG DC WELDING WITH MIG U4000iw AND U5000iw

- High frequency and LiftArc™ striking
- TIG pulse-welding with DC
- Current rise time, welding current, pulse time, base current, base current time, current reduction and post-current time can be set

For more information on WeldCloud™ see page 81

Technical data	Aristo® Mig U4000iw	Aristo® Mig 5000iw/U5000iw
Mains supply, V / ph	400 / 3	
Fuse, slow, A	35	
Setting range, A	16 - 400	16 - 500
Open circuit voltage, V	55 - 70	68 - 88
Open circuit power, W	60	50
Dimensions, LxWxH, mm	625 x 394 x 776	
Weight, kg (with cooling unit)	77	86
Enclosure class	IP 23	
Application class	S	

Maximum output at 40°C

35% duty cycle, A/V	400	-
60% duty cycle, A/V	320	500
100% duty cycle, A/V	250	400

Delivery includes

5m mains cable with CEE plug and 5m earth cable.

CONTROL PANEL U6

- MIG/MAG pulse-type welding or professional MMA welding
- QSet™ Parameter automation
- Preprogrammed synergic lines
- 2 / 4 stroke torch switch actions
- End crater filling
- Creep start, Hot Start and wire burn-back time that can be set
- Gas pre- and post-flow can be set
- Gas test and tension-free wire feed
- 10 memory slots
- Limit value assignment, password protection

CONTROL PANEL ARISTO U82

See page 76

PSF™ WELDING TORCHES

PROFESSIONAL MIG/MAG WELDING TORCHES

- Ergonomically shaped welding torches
- Ball joint in the hand piece
- Screwed gas nozzles
- Sprung switch contact pins

- Available in lengths of 3 m or 4.5 m
- PSF™ Centrovac fume extraction torch
- PSF™ RS3 - with 3 program switches
- CuCrZr contact tips with a long working life
- HELIX™ contact for mechanized applications

MXH™ WELDING TORCHES

ELECTRIC PUSH-PULL AND PUSH-PULL INLINE WELDING TORCHES

- Available in 6 m or 10 m length
- Optimal matching of the gear ratio with any Origo™, Aristo® Feed and Warrior™ Feed
- Usable with compact units Origo™ Mig C340, C420 and Mig C3000i
- Ideal for the welding of soft or thin wires, such as aluminium
- Swan neck that can be rotated by 360°
- CuCrZr contact tips with a long working life
- High ability to react to changes in the wire feed speed
- Ideal for the Aristo® SuperPulse process

WIRE FEED UNITS

GOOD WIRE FEED UNITS ARE CRUCIAL FOR MIG/MAG WELDING

The Feed 304, 3004, 484 and 4804 have been designed for professional use and to meet the toughest quality requirements. The wire feed units have robust 4-rolls drives with grooved and geared feed and pressure rollers. The pressure rolls are mounted in a balancing beam that distributes the pressure evenly over the rolls. The wire is fed consistently and accurately.

Electronically regulated motors ensure that there is a constant feeding of wire and thus for a constant welding current. The wire feed speed that you set is maintained with high precision. ESAB LogicPump ELP, the coolant pump is switched on automatically when connecting a water-cooled welding torch.

Feed 304 and 3004 can be used for welding wires of up to 1.6 mm, Feed 484 and 4804 for hard continuous use with up to 2.4 mm wire diameter. The relevant control panels decide the versatile functionality in connection with the selected welding current source.

For further details on panel options see page 78

Aristo® / Origo™ Feed*

* depending on choice of panel

Technical data	Feed 304 / 3004	Feed 484 / 4804

Cored wires	0,8 - 1,6

TAKING MOBILITY TO A NEW LEVEL

The MobileFeeds are „Off the Arc“ wire feed units. They draw their power directly from the welding circuit. This means that you do not require a heavy intermediate cable or a delicate control cable to the welding power source. The welding cable is sufficient. When using self-protecting filler wires you can even do without the gas bottle.

Used with an Warrior™ 400i CC/CV or Origo™ Mig 4004i, A44 the MobileFeeds becomes a light an extremely robust installation unit for MIG/MAG welding in the short and spray arc fields. Or alternatively use an MMA rectifier with the MobileFeeds. The MobileFeeds has a fully encapsulated and extremely robust housing.

With 4-roll wire feed and electronically regulated motor for even wire feeding.

YARDFEED 200 AND 2000

YardFeed 200 and 2000 are special versions of the Feed 3004, with especially small dimensions. Designed so that they can also reach welding areas that are very hard to get to, for example, through manholes. YardFeed is mounted in a protective frame that is provided with plastic runners to allow it to be moved easily. For 5 kg and 200 mm wire coils. Intermediate cables to the welding current source of up to 50 m are available.

Configuration options with step-switched and stepless current sources.

ORIGO™ FEED AIRMATIC AND PKB™ WELDING TORCH

- Wire feed device for compressed air-operated Push-Pull torches PKB™
- Excellent wire feeding, especially when used with soft wires
- Hose package lengths up to 16 m and large radius of action – intermediate cables up to 35 m
- Can be used with step-controlled welding power sources Origo™ Mig 320/410/510 and steplessly-controlled welding powers source Origo™ Mig 402c/502c/652c
- FeedAirmatic Digital Box enables use with the digital CAN bus power sources Aristo® Mig 3000i and Aristo® Mig 4004i/5004i/4004i Pulse
- In connection with Origo™ Mig 402c/502c/652c remote control of the welding voltage and digital display
- Regulation of the wire feed speed by the torch

MACHINE ACCESSORIES

Counter balance device

Spring-supported counterbalance for wire feed units. Can be rotated by 360°. Suits most power sources. Note the instructions for use regarding compatibility.

Counterbalance device **0458 705 880**

Strain relief for welding torches

Fits all Origo™ and Aristo® Feed, and also YardFeed
Recommended accessories for wheel set.

Strain relief **0457 341 881**

Rotating piece

The wire feed unit can be rotated on the current source by 360° in combination with MarathonPac™

Rotating piece **0458 703 880**

Suspension device

Suspension device for wire feed units, suits all Origo™ and Aristo® Feed.

Suspension device **0458 706 880**

Coil cover, steel

Coil cover made of sheet steel, suits all Origo™ and Aristo® Feed.

Coil cover, steel **0459 431 880**

Strain relief

Strain relief for intermediate cables

For wire feeder **0459 234 880**

For power sources

Mig 402c/502c/652c/4002c/5002c/6502c

0349 311 700

Wheel kit

Wheel set for wire feed units, suits all Origo™ and Aristo® Feed.

Wheel kit, front wheels turnable **0458 707 880**

Wheel kit, all wheels turnable **0458 707 881**

Upgrade set

Voltage free wire feed / gas test.
For Origo™ Feed M12 and M13

Upgrade set **459 465 880**

REMOTE CONTROL DIGITAL

MTA1 CAN

Multi-function remote control. Fixing mechanism, magnetic feet, Connecting cables available in various lengths. MIG/MAG: Voltage and wire feed.

MMA: Welding current and Arc Force. TIG: Pulsed current and base current

MTA1 CAN

0459 491 880

Heavy duty connecting cable for extreme stresses, e.g. hot workpiece surfaces. Reduces electromagnetic influences from outside.

COOLING UNITS AND AUTOTRANSFORMERS

EC 1000

Compact cooling unit for water cooled TIG torches. No connection kit or tools required. Suited for Renegade ET 300i/ET 300iP.

EC 1000	0445 045 880
ESAB Coolant 10l	0465 720 002

CoolMini

Compact cooling unit for water cooled TIG torches. Suited for Caddy® Tig 2200i and Caddy® Tig 2200i AC/DC.

CoolMini	0460 144 880
Connection kit for Caddy Tig 2200i	0460 509 880
ESAB Coolant 10l	0465 720 002

CoolMidi 1000

Compact cooling unit for water cooled torches. Suited for Aristo® Mig 3001i and Origo™ Mig 3001i.

CoolMidi 1000	0460 490 880
Connection kit for Mig 3001i and Tig 3001i	0460 685 880
Water flow guard	0456 855 881
Water return flow guard	0461 203 880
ESAB Coolant 10l	0465 720 002

CoolMidi 1800

Cooling unit for water cooled torches. Suited for Origo™ Tig 3000i AC/DC, Origo™ Mig C3000i and Aristo® Mig C3000i.

CoolMidi 1800	0459 840 880
Water flow guard	0456 855 881
Water return flow guard	0461 203 880
ESAB Coolant 10l	0465 720 002

COOL 1

Cooling unit for water cooled torches. Suited for Origo™ Mig 4004i/5004i, Aristo® Mig 4004i and Aristo® Mig 4004i Pulse.

COOL 1	0462 300 880
Water flow guard	0456 855 881
ESAB Coolant 10l	0465 720 002

OCE 2H

Cooling unit for water cooled torches for manual and mechanized solutions.

OCE 2H	0414 191 881
Water flow guard OCE-2 H	0414 231 880
Gasket kit for water pump	0459 699 880
ESAB Coolant 10l	0465 720 002

COOL 2

Cooling unit for water cooled torches. Suited for Warrior™ 400i and 500i CC/CV.

COOL 2	0465 427 880
ESAB Coolant 10l	0465 720 002

TUA 1 and TUA 2

Autotransformers suitable for ESAB equipment. TUA 1 Narrow for Origo™ Mig 3001i. TUA 2 Wide for Origo™ Tig 4000i DC, Origo™ Tig 4300i AC/DC and Aristo® Mig 5000i/U4000/U5000i.

TUA 1	0459 144 880
TUA 2	0459 145 880
Handle for TUA 1 w. mounting screws (2 required)	0459 307 880
Handle for TUA 2 w. mounting screws (2 required)	0459 307 881

ARISTO® U8₂ CONTROLLER

A UNIVERSE OF POSSIBILITIES

DEVELOPED FOR DURABILITY

ESAB introduced the second generation of Aristo® U8₂ digital controllers offering improved welding capacity and operator convenience.

The new U8₂ has developed as an addition to our Aristo® power sources and wire feed devices is designed for advanced manual and mechanized MIG/MAG welding, Pulsed MIG/MAG, TIG and MMA welding.

High degree of user-friendliness

Complex controllers are often impossible to understand without an in-depth knowledge of the product. Not so with the new Aristo® U8₂. The few controls that it has guide the welder intuitively and are ergonomically very easy to use even when wearing protective gloves. The large, bright display is clear and easy to read, with full text in English and in 16 other main languages.

It does not have a multitude of tiny knobs or buttons, nor does it use incomprehensible abbreviations.

QSet™

QSet™ is the best single parameter automatic arc system on the market for the perfect short arc. The advantages are enormous! You set up the machine with the appropriate gas/wire combination, press the torch switch and start welding within seconds.

The machine determines the optimum parameters and makes any changes as required in a fraction of a second.. The wire stick out which is normally a constant length in MIG/MAG welding, can be varied with QSet™.

Whether you are close to the work piece with the torch or so far away that the gas protection almost ceases, the welding arc remains unchanged - always perfect. Unbeatable in deep seams, if you have to weld around corners or are welding upwards coming out of the downhand position.

Utilised with CO₂ gas you can weld with QSet™ with extremely low levels of spatter and can drastically reduce the gas costs, compared with mixed gas, without any loss of quality. QSet™ is ideal for welding in restricted positions, root welding, GMA brazing and for reproducible results in the series production of parts. QSet™ is also available in many other ESAB controller / machine combinations.

Controlled functions	U6	U8 ₂	U8 ₂ Plus

SuperPulse™	-	-	●
Production statistics	-	-	●

Synergy lines

In the Aristo® U8₂ Plus version you have more than 230 synergic lines available to you for your welding applications. From construction steel to Super Duplex, from aluminium to Ni basic alloys or for applications of hard metal. You can create by yourself customized synergic lines for any desired material and any combination of protective gas and save them as new synergic lines. You can transfer data via the USB connection, to another Aristo® U8₂ or to your computer for data backup or exchange by e-mail.

Quality control

For storage of the measured values you are offered two options in the form of the setting limits and measuring limits. The setting limits prevent the operator from inputting excessively high values for the welding process. The measuring limits ensure that the power source does not exceed the input values. Up to 16 User Accounts on three levels with various access rights and a blocking codes can be used to prevent unauthorized persons from making changes.

Production statistics

The total arc time, total quantity of material and the number of welding processes can be logged per production statistics item. In addition, the arc time and amount of material for the last welding process are recorded. The calculated molten filler metal per length unit is shown for information purposes.

SuperPulse™

In order to attain higher welding speeds, deposition rates and better gap bridging, to reduce distortion in the components and to better balance the weld penetration and its profile, you have available in the Aristo® U8₂ Plus a version the ESAB SuperPulse™ function.

SuperPulse™ combines the relevant advantages of the various types of arc. For example, the quality of the pulsed arc with the productivity of the spray arc. Or pulse arc with short arc, to introduce the least amount of heat into the thinnest sheets of metal. Or the combination of two pulsed arcs with different frequencies, for example, for the welding of aluminium with a TIG look. Or a spray arc / short arc for thicker materials in restricted positions.

FEATURES

- For manual and mechanized applications
- Supports 18 languages
- Large, bright display
- Knobs to set the wire feed speed and tension
- Knob to scroll in the menu
- USB connection to save welding and quality data
- QSet™ the perfect short arc
- Limit value assignment of set / actual values
- Wire free burning
- LAN-compatible (Aristo® W8₂)
- WeldPoint™ software
- Standard package synergic lines (92)

ADDITIONAL FUNCTIONS

- Complete package synergic lines (>230)
- SuperPulse™
- File manager
- Automatic welding data backup
- Create your own synergic lines
- Production statistics

For more information see ESAB Tech Tips - a quickguide on Aristo U82 functions XA00174820.

CONTROL PANELS MIG/MAG

ONLINE WELD MANAGEMENT PLATFORM

WeldCloud™ is a secure, robust and scalable welding data management platform providing insights to facilitate continuous improvement in welding operations by efficiently tracking key parameters for each weld seam produced. This is especially useful for robotic applications as well as other automated solutions.

As the only productivity tracking platform using 3G combined with Wi-Fi and Ethernet, WeldCloud™ can plug into practically any in-house software system, alleviating irritating firewall and connectivity issues.

- **Traceability.** The platform can trace back to welds that have already been created and provide the details.
- **Two-way communication.** The platform can actually push settings to machines while machines can also send data back to the platform.
- **Alert management.** WeldCloud™ automatically pushes out alerts when machines have issues, as needed and scheduled by the user.
- **Simple integration.** Already own ESAB equipment? WeldCloud™ has solutions that can work with compatible ESAB machines and get you up and running and tracking, quickly.
- **User-friendly interface.** WeldClouds™ responsive design makes using the platform easy from wherever you are, on a desktop, at work on a laptop, or on the move on mobile or tablet devices.
- **100% scalable.** Put WeldCloud™ to the test by adding it on one or two machines and adding it onto others over time. You'll also benefit from new features and functionality that are constantly being developed and updated on the platform.

WeldCloud™

WeldCloud™ is available for the following machines for both manual and robotic welding applications:

Aristo® Mig 4004i Pulse - Integrated in power source or integration with existing power source by adding Top Box mounted on machine and Aristo® U8₂ controller.

Aristo® Mig 5000i/U5000i - Integrated in power source or integration with existing power source by adding Mobile Back Pack, Aristo® W8₂ mounted on machine and U8₂ controller.

Origo™ / Aristo® Mig 4002c/5002c/6502c - Requires Mobile Back Pack, W8₂ mounted on the machine and U8₂ controller.

WeldCloud is also available on Aristo® Mig 1000 AD/DC SAW for automated welding.

ROBOTIC WELDING RANGE

THE IDEAL POWER SOURCES

The Aristo® inverter power sources and the Origo™ chopper power sources are all designed to provide excellent performance in robotic welding. The inverters offer higher energy efficiency and the most advanced process capabilities and the choppers provide smooth operation and excellent robustness with a high tolerance for power supply variations found in some regions.

The power sources are also designed to integrate with ESAB's industry-leading WeldCloud™ online data management platform via Wi-Fi, mobile cellular or hard-wired Ethernet communication. For more details on WeldCloud™ please see page 81.

ARISTO® U8₂ CONTROL PANEL

The Aristo® U8₂ control panel is used in combination with Aristo® wire feeders to set and adjust welding parameters. The system is developed to meet the most demanding requirements yet is designed to be simple and easy to use. U8₂ allows you to perform Pulsed or Non pulsed welding with solid or flux cored wire on mild/carbon steel as well as on Stainless. Using solid wire, you can also achieve optimal results in aluminium. Optimal synergic lines for robotic and Swift Arc Transfer (SAT™) welding. For more details on U8₂ see page 76.

ARISTO® W8₂ INTERFACE

Aristo® W8₂ robotic communication interface that gives you full connectivity to the robot and enables WeldCloud™ connectivity. W8₂ utilizes the Anybus fieldbus connections (DeviceNet, Profibus, CANopen, EtherNet IP & EtherCat) for the Aristo® and Origo™ power sources.

ARISTO® ROBOFEED 3004W/3004HW

RoboFeed 3004W and 3004HW (hollow wrist) are digitally controlled feed units perform accurate speed control with the aid of a pulse encoder on speeds ranging from 0.8 to 30.0 m/min. The 4-roll feed mechanism with grooves in both feed and pressure rolls give stable feeding and low wear of the wire.

	RoboFeed	RoboFeed
Technical data	3004W	3004HW

ARISTO® RT ROBOTIC TORCHES

A full range of ESAB robotic torches is available in gas or water-cooled versions, for both hollow-wrist and standard arm robots. Aristo® robotic torches are the toughest in the industry allowing us to offer the industry's only guaranteed TCP location stability for the first year of operation.

For detailed information on robotic torches please contact your ESAB representative.

Aristo® Robotic Torches

OPTIMIZED ROBOTIC WELDING WITH MARATHON PAC™

MarathonPac™ Endless feedability bulk drums for solid wire and cored wire is essential in maximizing production efficiency and quality.

SWIFT ARC TRANSFER (SAT™)

SAT™ is a high productivity MIG process using AristoRod™ non-copper coated wires with advanced surface characteristics at travel speeds well beyond the limits of normal spray arc welding. The advantage with AristoRod™ non-copper-coated wire over copper-coated wires is that it does not quickly contaminate the feed system with copper particles.

SAT™ is developed for robotic, automated and mechanized welding and suited for fillet and overlap welds in thin to thick plate, in down hand positions. The process uses ESAB power sources together with the RoboFeed for wire feed speeds up to 30m/min in conjunction with U8₂ controller.

- Synergic lines are available for three AristoRod™ wire sizes and various shielding gases
- SAT™ produces flat welds with a good penetration and without undercut
- An additional advantage is the low heat input, resulting in less deformation

* For other feeder alternatives, see the Aristo® robot package sales brochure.

As long as the robot cabinet is equipped with the appropriate I/O board Aristo® Retrofit I/O Universal is a direct fit for: ABB S4, S4C, S4C+, Yaskawa ERC, MRC, XRC, KUKA KRC1, KRC2, Reis RS4, RS5, Fanuc R-J2, R-J3. Remember to always check I/O polarity.

If you cannot find your robot controller in this list, please contact your local ESAB representative.

MIGGYTRAC™ B501 AND RAILTRAC B42V

MECHANIZATION MADE EASY

Miggytrac™ B501 is a compact, battery-driven stepper tractor that easily automates your MIG/MAG process. Ideal for use with ESAB's semi-automatic power sources and feed units, Miggytrac B501 features the latest in stepper motor technology for high efficiency. A standard ESAB welding torch can be quickly attached to the unit.

Railtrac B42V is a welding tractor system of components that can be configured to create the optimal solution for your mechanized welding application. To minimize problems associated with harsh environments, most mechanical parts are constructed in aluminum or stainless steel. The system is designed for horizontal and vertical up/down when applicable.

Railtrac B42V can be easily connected to most ESAB wire feeders with no major modification. Remote adapters have to be mounted in feeders Aristo® Feed 3004/4804 and Warrior™ Feed 304. Railtrac B42V features different torch holders for torches and applications.

TIG WELDING

Tungsten inert gas welding (TIG) is one of the gas-shielded arc welding processes. The arc burns between a tungsten electrode that does not melt and the work piece. The electrodes, the arc and the weld pool are protected against the atmosphere by an inert gas. If a filler metal is required, it is fed in as cold wire, which melts into the weld pool.

It is possible to produce very clean and high-quality welds using the TIG process. There is no spattering, joining defects or undercutting and pores are easily

avoided. The process can be used either manually or partially or fully automated. TIG welding is mostly used on aluminium and high-alloy steels where a higher weld quality is often required.

The TIG process is often used for welding in nuclear facilities and the chemical, aerospace and food industries.

QWave™

TIG AC welding has been redefined by the unique QWave™ technology: an extremely stable arc with little noise - your advantage: precise completion of the process, top quality, better working environment.

True AC Rating™

ESAB units with True AC Rating™ always show the actual welding current. That is not necessarily a matter of course.

Inductance in the welding circuit can lead to discrepancies between the set and the actual current strength. Conventional units only show the desired current strength without actually delivering that shown output value

On the other hand, True AC Rating™ ensures the power source really delivers the current output displayed. This is important for monitoring the amount of heat that is applied.

RENEGADE ET 300i AND 300iP

POWERFUL AND PORTABLE

The Renegade TIG are inverter based High frequency TIG (HF) and MMA/Stick machines with extreme power to weight ratio. The compact format makes it easy to carry and bring to any jobsite. Combined with high duty cycle and the ability to run the machine on long mains and welding cable makes this a superior welding machine for both on- and off site applications.

The machine has an automatic input voltage sensor and can operate with any input voltage between 208 V and 528 V in 3-phase and 230V in single phase.

Available as none pulsed and as pulsed for thin sheet metal applications.

- Extreme power to weight ratio
- Designed for extreme conditions including up to +55°C ambient temperature
- Widest input voltage tolerance and ability to run on single and three phase with cables up to 100 m
- High speed pulse up to 999 Hz
- Easy to read and quick to set panel increasing the accuracy and reduces the down time
- Modular system with tool less connection to water cooler and trolley
- Rugged composite casing for durability
- IP 23 designed casework suitable for outdoor site work
- For installation and production
- For repair and maintenance

CADDY® TIG 1500i AND 2200i DC

DEVELOPED FOR DURABILITY

The Caddys are equipped with large OKC 50 welding current connections to withstand heavy loads. Due to the compact design with the polymer casing that is impervious to impacts, these devices are light and easy to transport. The large cooling unit and the carefully thought out design ensure a long working life and allow use even under rough working conditions. The inbuilt ArcPlus™ II function further improves the welding arc and ensures that there is less spatter and better restriking of the arc. The Caddy® has been designed in such a way that all the main components in the machine are kept clean and free of dust. Caddy® complies with the requirements of IP 23 and is suitable for use outdoors. The robust construction and the excellent welding properties of the machines ensure reliable use on a day to day basis.

Power Factor Correction - PFC. Caddy® Tig is equipped with automated power factor correction (PFC), which minimizes disturbing feedback effects in the mains supply network and enables maximum use of the available electrical mains supply.

- Professional TIG welding of alloyed, unalloyed and stainless steels
- Large radius of action due to the ability to use intermediate cables.
- Ø 2,5 mm² up to 100 m in length without power losses and better compatibility with generators through PFC - Power Factor Correction

- High frequency and LiftArc™ striking
- 2 / 4 stroke torch heliarc
- Professional manual electric welding with ArcPlus™ II regulation and adjustable HotStart and ArcForce
- Polymer-aluminium housing that is impervious to impacts
- Caddy® Tig 2200i optionally gas- or water-cooled with CoolMini cooler
- Cooler with ELP, ESAB LogicPump (forced switching over of the water cooling if required)
- Type of insulation IP 23 - for work outdoors
- Protection against overload
- For site installation and production
- For repair and maintenance
- 2 different trolleys to choose from, page 72

With the environment in mind
Active power factor connection
Efficient energy utilisation
Harmonics EN 61000-3-12
RoHS 2002/95/E

PFC

CONTROL PANEL TA33

BUDDY™ TIG 160

PORTABLE SOLUTIONS FOR PROFESSIONAL WELDING

The Buddy™ family is a series of robust and durable power source for the professional welders. The machines provides state-of-the-art welding performance and reliability through use of the latest high grade IGBT technology.

Designed for durability

Buddy™ Tig 160 is a user friendly, robust and still light weight DC TIG machine, offering HF start and a stick (MMA) mode.

The internal electronics are cooled by a highly efficient fan for added reliability and monitored by a thermal protection system. The machine has been equipped with three heat sinks which further extending the life time of the product. The casing has been designed to withstand harsh environments and is rated to IP 23S standard. The machine incorporates both a shoulder strap and a robust carry handle.

Buddy™ Tig 160 provides good TIG welding with smooth arc characteristics. The HF arc start prevents contamination of the weld material and electrode. The built in gas valve automatically controls the gas flow ensuring a low gas consumption. The operator can chose between 2 stroke and 4 stroke torch trigger mode. The machine can weld mild steel or stainless steel with or without filler material.

Ideal applications

- Plant Fabrication & Maintenance
- Site Maintenance/Repair
- Civil Construction
- General Fabrication
- Agriculture

The control panel on the Buddy™ Tig 160 features one adjustment knob to set the weld current and one to set the slope down time in TIG mode or the arc force in MMA mode.

ARISTO® TIG 4000iw DC

The Aristo® Tig 4000iw is the ideal partner for MMA and TIG DC welding in your operation. Unalloyed and low-alloy steels, stainless steels, copper alloys and nickel-based materials can be welded with Aristo® Tig 4000iw with an extremely stable arc and excellent striking properties. A powerful device for production welding , repair or servicing work.

Select what is the optimal unit for you:

Aristo® TA4

includes the main functions for professional TIG welding

Aristo® TA6

Extends the TIG functions to include TIG pulse-welding for the optimal application of heat to sheet thicknesses above 0.5 mm.

Optionally, TIG torches with Up/Down remote controller to set the welding current during welding are available, also with flexible torch head.

Both control panels are characterized by simple to operate parameter settings.

- Inverters based on IGBT technology - high performance and reliability
- Excellent welding properties - high utility and high quality
- Housing with frame made of Alutech™ extruded profile, can be lifted by crane
- Dust filter included - reduces possible failures due to deposits of grinding dust, for example
- TIG torches are available with Up/Down remote control
- Energy-saving mode after 6.5 minutes
- ELP, ESAB LogicPump, starts the water pump automatically
- MMA electrodes up to 6.0 mm
- Carbon arc gouging up to 8.0 mm
- Can be controlled remotely, digital display
- IP 23 - allows use outdoors

100% duty cycle, A	250

CONTROL PANEL TA4

- TIG and MMA welding, carbon arc gouging
- High frequency and LiftArc™ striking
- 2 / 4 stroke torch switch
- Simple parameter setting for the current rise time, welding current, current fall time and gas pre- and post-flow time
- MMA welding with HotStart and ArcForce

CONTROL PANEL TA6

- TIG and MMA welding, carbon arc gouging
- Multi-lingual menu guidance
- High frequency and LiftArc™ striking
- 2 / 4 stroke torch switch
- TIG pulse-welding with DC
- Micro-pulses up to 0.001 s
- Gas flushing, gas pre- and post-flow
- Current rise time, welding current, current fall time
- 10 memory storage slots
- 3 memories for parameters that can be called up before, after or during welding from the torch button
- Minimum current setting for remote controller
- Limit value assignment and password protection
- MMA welding with Hot Start and Arc Force

CADDY® TIG 2200i AC/DC

FOR COMMERCE AND INDUSTRY WITH TOUGH DEMANDS FOR REPAIR AND SERVICING WORK

The Caddy® are equipped with large OKC 50 welding current connections to withstand heavy loads. Due to the compact design with the polymer casing that is impervious to impacts, these devices are light and easy to transport. The large cooling unit and the carefully thought out design ensure a long working life and allow use even under rough working conditions. The inbuilt ArcPlus™ II function further improves the welding arc and ensures that there is less spatter and better restriking of the arc.

The Caddy® has been designed in such a way that all the main components in the machine are kept clean and free of dust. Caddy® complies with the requirements of IP 23 and is suitable for use outdoors. The robust construction and the excellent welding properties of the machines ensure reliable use on a day to day basis.

Power Factor Correction - PFC. Caddy® Tig is equipped with automated power factor correction (PFC), which minimizes disturbing feedback effects in the mains supply network and enables maximum use of the available electrical mains supply.

Furthermore, the devices are less sensitive to fluctuations in the mains power supply and thus allow operation from generators.

TIG AC/DC WELDING

- Professional TIG AC/DC welding
- QWave™ - quiet and highly dynamic AC arc
- True AC Rating™ - correct display of the actual welding current
- Large radius of action, over 100 m with mains cable cross-section 2.5 mm² and improved compatibility with generators through PFC - Power Factor Correction
- High frequency and LiftArc™ striking
- 2 / 4 stroke torch switch actions
- Professional MMA welding with DC and AC
- ArcPlus™ regulation with adjustable HotStart, ArcForce and switchable polarity (DC)
- Type of insulation IP 23 - for work outdoors
- Polymer-aluminium housing that is impervious to impacts
- ELP, ESAB LogicPump, automatically switches the water cooling
- Protection against overtemperatures
- For installation and production
- For repair and maintenance
- TIG torches with Up/Down remote controller
- Caddy® Tig 2200i AC/DC optionally gas- or water-cooled with CoolMini cooler
- 2 different trolleys to choose from, page 72

Trolley 
0460 330 880

CONTROL PANEL TA33 AC/DC

- Selection of the TIG parameters by inputting the sheet thickness
- Current slope up / slope down can be set
- Gas pre-flow / post-flow time can be set
- Minimum current setting for remote controller
- Can be controlled remotely / digital display

CONTROL PANEL TA34 AC/DC

- Graphic illustration of the course of the process
- AC frequency and balance monitoring optimizes the weld pool
- TIG pulse-welding with DC
- DC micro-pulses up to 0.001 s
- Electrode preheating for better striking and longer life of the electrodes in AC welding
- Current slope up / slope down can be set
- Gas pre-flow / post-flow time can be set
- Parameter storage (2x), can also be called up during welding via the torch button
- Minimum current setting for remote controller
- Can be controlled remotely / digital display

ORIGO™ TIG 3000i AC/DC AND 4300iw AC/DC

FOR DEMANDING APPLICATIONS IN TIG WELDING

- Professional TIG AC/DC welding
- QWave™ - quiet and highly dynamic AC arc
- True AC Rating™ - correct display of the actual welding current
- Professional MMA welding with Origo™ TIG 4300iw AC/DC
- ArcPlus™ regulation, HotStart, ArcForce can be set and switchable polarity (DC)
- IP 23 protection - for work outdoors
- Energy-saving mode after welding is interrupted
- Digital display
- Protection against overtemperatures
- Origo™ TIG 4300iw AC/DC, can be lifted by crane

- Two different trolleys for Origo™ TIG 3000i AC/DC
- Origo™ TIG 3000i AC/DC optionally gas- or water-cooled with cooler CoolMidi 1800
- ELP, ESAB LogicPump, automatically switches the water cooling
- TIG torches with Up/Down remote control

HELIARC™ 283i AND 353i AC/DC

HIGH QUALITY AC/DC TIG & MMA WELDING

The new Heliarc power sources have everything you need for advanced AC/DC TIG welding of Aluminium, Aluminium alloys, magnesium alloys, stainless steel, mild steel and copper alloys. Heliarc weld stick electrodes, even difficult to start 'Cellulosic' AWS 60XX.

Heliarc has the functionality to achieve excellent results. AC & DC pulse, extended AC frequency & balance controls, Ability to store 60 programs and the ability to switch between two amperage levels while welding are just a few of the features.

AC & DC Pulse - Used to regulate heat input, particularly advantageous on thin materials. Using pulse, increases arc stability & puddle control for faster welding speeds with less plate deformation.

Extended AC Balance - Reduces tungsten erosion and provides operators with improved penetration or cleaning effect essential for high quality welds.

Extended AC Frequency - Permits the use of smaller tungsten electrodes, maintains tungsten shape. provides a focused, narrow and more efficient arc cone resulting in improved penetration, narrow weld bead (requiring less filler material) lower heat input and increased travel speed improve efficiency helping reduce costs.

AC Hot-start at low amp AC TIG gives accurate starts when welding thin plates.

- High quality TIG-welding - Exceptional performance across a wide variety of materials.
- Excellent Arc control - Stable arc characteristics and settings provide excellent arc control and fast welding speed
- Hot start AC - Excellent arc starts at low Amp AC TIG welding
- AC or DC Pulsed TIG welding - Easy control of heat input and the weld pool. enhanced aesthetic weld bead appearance
- Dual TIG function - Switch between two weld current levels while welding via torch switch. Allows operator to manually control weld puddle fluidity
- Superior Stick (SMAW) performance - Even with 60XX electrodes
- Liftarc Mode even on AC - Ideal for applications where HF (High Frequency) is not permitted
- Inverter / microprocessor technology - Highly efficient with low input power requirements
- AC Pulsing 0.2-2Hz - Ideal for thin gauge Aluminium

TXH™ TIG TORCHES

FOR THE DEMANDING WELDER

The main characteristic of the TXH™ torches is above all their quality. The torches and torch fittings offer a maximum amount of convenience, versatility and ergonomics.

You can vary between air- or water-cooled, with or without gas-valve and with or without flexible neck to suite your individual application.

PLASMA CUTTING

Plasma cutting is an extremely versatile fusion cutting process to cut almost all metals. In plasma cutting the arc burns in a highly ionised plasma column between an electrode that does not melt and the work piece. It is restricted further by a nozzle, whereby the power density and the stability of the flowing plasma are greatly increased.

The plasma arc that is created in this way has a temperature of up to 25,000 °C. The high energy density of the plasma stream rapidly melts the material and its kinetic energy drives the molten material out of the cutting groove.

The high cutting speed ensures minimal distortion and cleanly cut edges. Compressed air is mainly used as the plasma gas in mobile units, which makes the process very easy to use. Using this procedure it is also possible to cut packages of sheet metal, a process which cannot be done using oxy-fuel flame cutting. High-alloy steels, aluminium and copper can also be cut very economically with plasma cutting. Plasma gouging is also an option with the addition of a gouging nozzle, which has clear advantages over carbon arc gouging torches. It is faster, quieter, cleaner and more precise.

Plasma gouging

Plasma gouging is the best genuine alternative to gouging using carbon electrodes. Less fumes, quieter, reduced post work cleaning. The initial voltage and power reserve together with the V/A curve are crucial factors for good working results. In addition, the unit must have high voltage reserves to keep the extremely long arc stable during the gouging operation. In the field of mobile plasma units the CutmasterTM 40-120 have proved to be superior in performance to many other units for plasma gouging.

CUTMASTER™ TRUE SERIES

TRUE™ CUT CAPACITY

Cutmaster™ TRUE series has been designed with the idea that recommended cut capacity should also be the true cut capacity. The TRUE cut series eliminates the concept of having to buy up, purchasing a machine larger than you actually need. With the introduction of the Cutmaster TRUE series a 25mm recommended capacity machine with cut 25mm all day long.

Cutmaster™ 60

Cutmaster™ 40

- Cutmaster offers excellent performance for cutting stainless steel
- Superior cut quality on thinner metals (Less than 3mm)
- Cutmaster TRUE™ systems can cut with little to no dross
- TRUE GUARD roll bar provides easy transportation, protects the front and rear of the power supply
- Lightweight design improves portability (reduced nearly 50%)
- Auto Pilot Restart instantly reignites the pilot arc while cutting expanded metals
- Multiple torch capability (hand/mechanized/automation)
- 3 year warranty with 1 year warranty torch

ADVANCED TORCH CONNECTOR (ATC)

The ATC quick disconnect design brings extra flexibility to almost any plasma system. Switching to a machine torch, swapping out a damaged unit, or simply changing lead lengths is done quickly and requires no tools.

ATC Lead extensions offer the flexibility of working up to 30.4m away from the power supply. The ATC makes it easy to add or subtract total torch lead length as requirements change.
